HACK Logger Pro V3.8.6.1 Full (April-2022)

(via: Homepage: Documentation: App: Q: Why haven't the rebel factions in the Galactic Empire been able to destroy the Death Star? They have tried a few times in A New Hope and Return of the Jedi. Why doesn't the Rebel Alliance have any trouble hitting the Death Star? A good example is the one below from Return of the Jedi. A: The answer is simple: They never did. Even before the first attempt, the Death Star was a vulnerable target. Remember, the Death Star is the most technologically advanced weapon in the known galaxy, with all the best (and most expensive) tech the Empire had at their disposal. The Rebel Alliance had only the resources of a small, untrained army. Even the best-trained starfighters in the Alliance probably wouldn't be able to penetrate the shields. If they succeeded, a single star destroyer could destroy a third of the rebel fleet in seconds. The only reason they didn't do it is that they didn't. They didn't know how, and couldn't afford to risk their only shot. No one outside the Empire knew how to destroy the Death Star. They knew, as did the Rebel Alliance, that it was designed for space warfare. How would the Rebel Alliance fight inside a planetoid-sized object? They didn't. The Rebels knew the potential size of the weapon they were up against. They knew they needed to get around it. The Death Star was just part of the larger story. Silverlight ResourceDictionary with shared key always loads last I have a silverlight application, and I added a ResourceDictionary as a static resource in the App.xaml. The dictionary contains a string key, which I then use as the value of the ResourceDictionary in various places in the app. So for example, it might look like this: The value of the style resource is set to the string Test, and it works as expected. The
