Aug 10, 2016 Do I have to have both US and Japanese bios or is there a single.
"For the BIOS: Search around for "SEGA_101.BIN" and "SEGA_100.BIN". ↑
"Have you got your machine running?" ↑ "Sure." ↑ "Okay, first lets take a look at
the monitor" ↑ "Fine" ↑ "Let me show you something." ↑ "Careful, it can still
jump sometimes" ↑ "It should be right there." ↑ "Right." ↑ "Do you see a readout
or are there lights?" ↑ "Yes, there are, they flash." ↑ "Now we need to read the
two numbers at the bottom." ↑ "Right, and what numbers are those?" ↑ "They are
the Disk ID." ↑ "I see." ↑ "Great, we got a readout on the monitor. Now lets get
your game running." ↑ "All right. I think you know the way, so we are ready to
rock and roll." ↑ "Right. Now the monitor is probably a little bright, so let's open
the back to lower the brightness a bit." ↑ "Well, now we can just turn up the
brightness." ↑ "Good. Now we are all set. Let's see what happens when you turn
the power on." ↑ "Check it out!" ↑ "Now everything is dark, but what do you see
on the monitor?" ↑ "The monitor is working, but it is really bright, I can't see
anything." ↑ "So now we can try to turn up the brightness, is that the monitor, or
the game?" ↑ "It is the monitor. Let me see if I can find a way to lower it." ↑
"Alright, lets open the back again." ↑ "Now the brightness is back to normal, and
now we can see everything on the monitor." ↑ "Can you see the game running on
the monitor?" ↑ "Yes, it is running, but there is not much to see." ↑ "So what is it
that you see?" ↑ "Let me show you something." ↑ "Now we need to look on the
right and left sides of the monitor." 2d92ce491b
