I am trying to fix an issue with stellar phoenix in my research data. I have three drives. What I did was attach all of these drives to my pc. I then ran stellar data recovery on all 3 drives and backed up the files that I needed. I then ran a scan of the entire drive but found nothing. I then ran a forensics scan with stellar data recovery and found data on the last drive. I have recovered 1023 files and the file size varies between 1kb and 9.5mb. Unfortunately, most of the files that were found were duplicates.
